Summary

Backend engineer with 7+ years building reliable, cost-efficient distributed systems. At Datadog, shipped JavaScript Debug IDs, cutting duplicated symbol ingestion by 95%+, delivered native crash symbolication across Windows, macOS, iOS and Linux, and cut on-call pages by 98%. Strong in Go, Rust/CGo, caching and cross-team ownership

Technical Skills

Key Skills: Backend Systems, Distributed Systems, Production Incident Investigation, Observability, Systems Reliability
Programming: Go, Rust, Javascript/Typescript, Python, SQL (PostgreSQL)
Tools: Kubernetes, Terraform, Docker, Kafka, Redis, AWS S3, gRPC, Datadog, Bazel
Frameworks: Node.js, FastAPI
Languages: Portuguese (native), French (B1), English (C1-C2)
Interests: Entrepreneurship, business strategy, engineering leadership, investing, reading

Experience

Datadog Paris, France

Software Engineer 1 *April 2026 – Present*

- Led end-to-end delivery of JavaScript Debug ID support across 10+ services (intake, API, UI), cutting duplicated symbol ingestion by 95%+ for the largest org
- Shipped native crash (minidump) symbolication for Windows, macOS, iOS and Linux: CFI cache generation, Rust/CGo bindings and upstream fixes to the Symbolic library
- Built a disk cache for symbol files (mmap, batched lookups, stream-to-disk), cutting S3 GET requests by 40%+; drove rollout with partner teams
- Implemented a per-frame distributed cache for JS unminification (p95 40ms→4ms, p99 180ms→120ms)
- Cut sourcemap-processor on-call pages by 98% after reducing OOM kills by 99%
- Automated Electron symbol ingestion with a scheduled job and enabled sourcemap uploads via a documented public API

Technical Escalations Engineer 2 *October 2024 – April 2026*

- Eliminated 100+ weekly production crashes (→0) via root-cause analysis, deterministic memory fixes and an allocator migration in a high-throughput deobfuscation service
- Drove splitting a critical service into independently scalable deployments and owned a cross-team Rust/CGo FFI library upgrade
- Unblocked Next.js + Turbopack customers from source code integration failures, shipping the fix across multiple services
- Introduced LLM-powered automation (-50% operational burden) and Terraform-managed dashboards, monitors and runbooks

Additional Experience

- **Technical Support Engineer 2**, Datadog — Paris, France (Nov 2023 - Oct 2024): Exceeded ticket targets by 70% and handled enterprise escalations while mentoring 5+ engineers; Top Dog Award (Q2 2024)
- **Customer Success Engineer → Senior Technical Support Specialist**, Usercentrics — Lisbon, Portugal (Sep 2021 - Nov 2023): Delivered privacy compliance integrations across web and mobile for enterprise clients; built onboarding automation (-20% setup time); mentored 5+ team members
- **Junior Solutions Developer**, Truewind - Recife, Brazil (Feb 2020 - Aug 2021): Built a mobile platform with 80k+ monthly users using OutSystems, C# and AWS. Collaborated cross-functionally on requirements and QA
- **Full Stack Engineer (Internship)**, Enso Origins — Coimbra, Portugal (Feb 2019 - Aug 2019): Engineered two internal platforms using PHP, PostgreSQL and Docker that automated multi-system account management and improved productivity by 200%

Education

Master of Software Engineering, Altice Labs Award for Best Master's Student | Évora University, Portugal 2024
Bachelor of Software Engineering | Coimbra Higher Institute of Engineering, Portugal 2019
